

## Where Does Garbage Go?

We are littering and using too much garbage. Animals are dying because of it. Where does it go and what kind is it? Garbage goes to landfills but it also goes to oceans. Most of the garbage on earth is paper. Garbage may also go in animal's stomachs and then they die. Let's recycle and compost! We can help by recycling bottles and papers. Did you know you can compost any peels and other fruit and vegetables we don't eat so plants will grow healthy? We could compost or recycle 80% of our garbage! Do you know many pounds of garbage we are making in one year? 160,000 pounds we make in a year! Our landfill (dump) is filled with 50% of paper, 6% of metal, 1% of glass, and 13% of food and yard waste. In just 1,000 years the Earth will be filled with trash. Don't waste so much garbage!
